REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The Applicant claims a fuel cell stack antifreeze system that purges a plurality of fuel cell stacks connected in parallel, comprising: a compressor that supplies pressurized cathode gas to each fuel cell stack of said plurality of fuel cell stacks; and a controller that deactivates a first group of one or more of said plurality of fuel cell stacks and maintains operation of a second group of one or more of said plurality of fuel cell stacks, wherein said second group powers said compressor and said compressor purges excess fluid from said first group using said pressurized cathode gas.

In the prior art of record, Kato et al., U.S. Pat. Application Pub. 2004/0053092, teach a single fuel cell stack and a control unit controlling the single fuel cell stack by controlling power operation in the fuel cell and operates electrical heaters and a water purging device when power operation is stopped. Roberts et al., U.S. Pat. Application Pub. 2001/0055707, disclose control of a single fuel cell stack wherein the controller shuts down the system by opening the electrical circuit switch, closing the reactant supply valves, and opening the purge fluid valves.

However, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a fuel cell stack comprising a controller that deactivates a first group of a plurality of fuel cell stacks while maintaining operation of a second group of the fuel cell stacks. Additionally, the prior art of record does not disclose the second group of fuel cell stacks powers the compressor.
